

Ceiling Grids

Design-Build Solutions for:

- Catwalks
- Clean Rooms
- Fall Protection Systems
- General Support Systems
- Medical Equipment Supports
- Roofwalks
- Spaceframes
- Structural Ceiling Grids
- Telecom Caging

Unistrut is the only metal framing manufacturer that offers design-build services for all its manufactured products.

Why Unistrut Construction?

Unistrut Corporation, the manufacturer of Unistrut Metal Framing, United Interlock Grating, Prime Angle and Unistrut Clean Room Wall Systems has been in the specialty contracting business, as Unistrut Construction for over 60 years. Unistrut Construction's capabilities include conceptual design, engineering and installation services regarding strut-related applications. This design/build philosophy has made Unistrut Construction one of the only nationally recognized installers for special metal framing application projects. Some of these special application projects include:

- **Structural universal ceiling grids**
- **Medical/radiology overhead equipment supports**
- **TV/monitor supports – toilet partition supports**
- **Operable wall supports**
- **Catwalks/mezzanines**
- **Roofwalk systems**
- **Telecom caging systems**
- **Clean room wall systems**
- **Fall protection systems**
- **Seismic equipment bracing**
- **Patient lift system supports**

Unistrut Construction Advantages Over Traditional Support Methods

Unistrut Construction Metal Framing designs for overhead supports offer the following advantages over welded steel structures:

- **Adjustability** - The inherent properties of the Unistrut Metal Framing System allow for the support structure to be positioned or adjusted to suit any changing equipment room layouts (unlike welded steel structures).
- **Mechanical Connections** - The Unistrut Metal Framing connections are made with structural steel nuts and bolts installed with standard hand tools, thereby eliminating the need for special jobsite welding.
- **Adaptability** - The Unistrut Metal Framing channel is available in a variety of profiles offering the Unistrut Construction design team the flexibility to develop an unlimited variety of solutions for any new or retrofit project application.
- **Fast & Efficient** - The bolt-together design of the Unistrut Metal Framing System allows our installation team to finish projects much faster than most welded steel structures allow.
- **Accountability** - One source for design and construction.
- **Experience** - A proven, experienced team successful in working on these types of projects.

Unistrut Construction – your Design/Build team.

Let us install your next project -- we'll eliminate time-consuming problems so you can focus on your priorities.
